

NUGGET BIO

Origin: United-States

Nugget was developed by the USA Breeding Program in the 1970s and released in 1983.

He is a descendant of Brewers Gold and helped create the Millennium.

Because it itself has a lot of alpha acid but little cohumulone, it brings a much appreciated bitterness boost to IPAs.

Its high level of myrcene oil gives it a fairly green, grassy scent. In dry hopping, it will bring a very powerful nose.

TYPE OF HOP:
Bittering
